## **Multigig Grows Global Sales Channel** ***Teams with Leading Representatives in US, Korea and Japan***

**SCOTTS VALLEY, CALIF. – October 29, 2008** – Multigig Inc., a technology leader in next generation clock and timing solutions, today announced the company has teamed with four manufacturing representatives to help drive sales worldwide. The four representatives, Anchorpointe Sales in Northern California, Arkian in Korea, Platinum Associates in Southern California, and Premier Technologies Inc. of Japan, further enable Multigig to connect with current and future customers and provide them with the lowest jitter, lower power and higher performance clock and timing solutions available today.

The move demonstrates Multigig's initial steps to make available its leading edge clock and timing products, with the support of experienced representatives, to some of the company's first-tier geographic markets: US, Korea and Japan. Earlier this year, Multigig introduced the first clock synthesizer ICs to break the 100 femtosecond jitter barrier with its first product family, the QuietClock family. The QuietClock family covers the most popular frequencies used by PHY, MAC, SERDES, and memory subsystems used in the communication, telecom, networking, server and storage markets.

"Multigig clock and timing solutions can address various products in the wired and wireless communications markets and partnering with the best representatives in four of our top markets will enable us to reach out to a greater customer base than we could via direct sales outreach. The companies we have established relationships with have all proven they have the industry know-how to increase our reach while also provide great customer service to their clients," said Haris Basit, CEO, Multigig, Inc.

"We did significant due diligence before we decided to represent Multigig into the Japanese market. We have a reputation to bring the most innovative technologies to Japan and we think that our customers will benefit from what Multigig will allow them to achieve", commented Larry Yoshida Chairman of Premier Technologies Inc.

Arkian, the Korean representative, has a long and successful track record of selling clock and timing products within South Korea to major companies including Samsung and LG. Teaming Multigig's high performance timing portfolio with Arkian's vast market knowledge is a winning combination. The Northern California representative, Anchorpointe Sales has been focused on networking and communications and its current list of clients include Altera, Aquantia, Bay Microsystems, Dune Networks, Monolithic Power, PMC Sierra, and Sandisk. Platinum Associates is a leading sales representative and distributor in Southern California and has a strong background in the Aerospace, Consumer, Networking and Telecom industries. In Japan, Premier Technologies, Inc. is comprised of seasoned Japanese semiconductor executives and operations talent and has proven successful at providing support for high-tech startups from the incubation stage to a full direct operation in Japan.

### **About Multigig, Inc.**

Multigig, Inc., is a fabless semiconductor company that provides advanced clock and timing solutions for the wired and wireless communications markets. Over 30 issued patents protect Multigig's proprietary technology. Multigig's corporate headquarters are located at 100 Enterprise Way, Ste. A3 Scotts Valley, CA 95066. For more information on the company and products visit Multigig online at [www.multigig.com](http://www.multigig.com)

### **About AnchorPointe Sales**

AnchorPointe Sales is a technical manufacturer's representative focused on providing innovative solutions to their Northern California customers. With strong partners like Altera, PMC-Sierra, Monolithic Power, Sandisk, Aquantia, Dune Networks, XtremeData, Proworks and now Multigig, AnchorPointe is uniquely positioned to service many market segments, including Communications.

### **About Arkian**

Arkian is a leading distributor of semiconductor and board level solutions to major high technology Korean companies. Arkian provides best-in-class support to design, system, and component engineers with supplier's next generation technology and products for networking, displays, digital TV, computer, and mobile applications. Arkian has extensive market knowledge and expertise in sales of best-in-class clock and timing products into Korea.

### **About Platinum Associates**

Platinum Associates has a major presence in Southern California, supporting all three major markets, LA, Orange County and San Diego with a strong line card enabling the company to target a broad spectrum of applications and customers, including Networking and Telecom, Consumer, Automotive & Industrial, Military/Aerospace. Principals currently represented by Platinum include, Actel, Aptina, Bosch, GSI Technology, Marvell, Micron, Multigig, Pulse, Samsung, Seiko.

### **About Premier Technologies Inc.**

Premier Technologies, made up of many former senior executives of Japanese semiconductor operations and successful executives of large Japanese distributors to the Japanese semiconductor market, has an extensive track record in successfully bringing high-tech companies to the Japanese market, and provides full support for high-tech startups from the incubation stage to a full direct operation in Japan.
